

What is claimed is:

1. A case for containing an electrical instrument, comprising:
 - a frame having a peripheral wall portion;
 - a cover member having a peripheral wall portion fitted on the peripheral wall portion of said frame and configured to form a space for containing the electrical instrument between the frame and the cover member;
 - at least one hole provided in one of the peripheral wall portions of the frame and the cover member to fix the frame and the cover member; and
 - a protrusion provided on the other of the peripheral wall portions of the frame and the cover member for being inserted in said hole.
2. The case according to claim 1, wherein said electrical instrument has a vibrating plate fixed to the frame and a magnetic circuit attached on the frame to vibrate the vibrating plate.
3. The case according to claim 1, wherein a plurality of protrusions are provided on at least one of the frame and the cover member, and holes in which the protrusions are inserted are provided in the other of the frame and the cover member, said protrusions and holes each being arranged to be spaced peripherally of the frame and cover member on peripheral wall portions of the frame and the cover member.
4. The case according to claim 1, further comprising a lock part for locking the frame and the cover member.

5. The case according to claim 4, wherein said lock part has a concave portion formed in the frame, for inserting a deformed portion in which a portion of the peripheral wall portion of the cover member is deformed, after the protrusions of the frame are inserted into the holes of the cover member.

6. A micro-speaker comprising:

a frame;

a sound generator attached to the frame and including a vibrating plate to which a voice coil is fixed, a yoke, a magnet fixed to the yoke, and a top plate fixed to the magnet;

a cover member attached to the frame for protecting the vibrating plate;

a plurality of protrusions provided on a peripheral wall portion of the frame; and

a plurality of holes provided in a peripheral wall of the cover member for inserting the protrusions;

said cover member being fixed on said frame by inserting said protrusions in said holes.
